

Block 3: Lead Upload Module (Features Block)

1. General Access & Sub-Block Structure

- **Location:** Standalone Feature Module (Outside of Settings).
- **Sub-Blocks & Upload Options:**
 1. Data Record Upload Option
 2. Bulk Upload Option Block
 3. Single Upload Option Block
 4. Report Block
- **Role Access Permissions:**
 - **Super Admin:** Access to Data Record Upload, Bulk Upload, Single Upload, and Report blocks.
 - **All Other Users (Admin, Manager, Team Lead, Executive):** Access strictly limited to Single Upload option.

2. Data Record Upload Option (Super Admin Only)

- **Purpose:** Allows the Super Admin to upload master datasets/records that serve as the central reference database for lead comparison.
- **File Format & Validation Rules**
 - **Supported Format:** Excel sheet upload.
 - **Mandatory Columns:** CONTACT NAME, CONTACT NUMBER, LANGUAGE.
 - **Strict Order Requirement:** Column order must strictly follow: **1) CONTACT NAME, 2) CONTACT NUMBER, 3) LANGUAGE.**
 - **Error Handling:** If columns are missing or out of sequence, the system must halt processing and throw the exact error message: "Invalid File Format".

3. Sub-Block 1: Bulk Upload Option (Super Admin Only)

- **Data Input & Strict File Column Validation:** Excel sheet upload
 - **Validation Rule:** The uploaded Excel sheet **must** contain CONTACT NAME, CONTACT NUMBER, and LANGUAGE.
 - **Strict Order Requirement:** The column order in the Excel file **must** follow this exact sequence: **1) CONTACT NAME, 2) CONTACT NUMBER, 3) LANGUAGE.**
 - **Error Handling:** If any of these mandatory fields/columns are missing or out of order in the uploaded sheet, the system **must throw an error, halt the upload completely, and display the exact error message:** "Invalid File Format".

- **Lead Validation Categorization:**
 - **Data Record Comparison:** Once the file format validation is passed, the uploaded leads are compared directly against the existing master data records uploaded by the Super Admin.
 - **Successful Leads:** New leads that do not exist in the master data record.
 - **Database Update Rule:** All successful leads must be updated in the existing database.
 - **Duplicate Leads:** Leads whose contact number already exists in the data record. Duplicate entries must be detected, merged/deleted from the upload file, and not re-added as new.
 - **Failed Leads:** Uploaded records missing required individual row data.
- **Analytics, Visualization & Data Export:**
 - Provide visual charts (Bar Chart or Pie Chart) displaying counts of Successful, Duplicate (Merged/Deleted), and Failed leads.
 - Provide a single-click button to download separate Excel files for Successful Leads, Duplicate Leads, and Failed Leads.
- **Language-Based Filtering & Dynamic Lead Assignment:**
 - Successful leads must be filtered by the Language field specified in the Excel sheet.
 - **Integration with Block 1:** Super Admin can assign these confirmed leads to system users based on language in custom quantities.

4. Sub-Block 2: Single Upload Option (All Users)

- **Data Input Fields:** Contact Name, Contact Number, Language.
- **Database Comparison & Duplicate Warning:**
 - Uploaded entry is compared against the central master data records uploaded by the Super Admin.
 - **If New Lead:** Automatically saved and updated in the main database.
 - **If Duplicate Lead:** The system blocks creation and displays a warning: *"Lead already exists, please contact Super Admin."*

5. Sub-Block 3: Reports (Export & Download Feature)

- **Download Mechanism:** A "Download Report" button must be available within the UI to instantly export and generate a PDF file.
- **PDF Report Content Structure:**
 - **Super Admin View (Page / Section 1):**

- Displays the total count of unassigned leads available in the system.
- Data must be strictly categorized and broken down language-wise based on the LANGUAGE column from the uploaded Excel sheets.
- **User Level View - Integration with Block 2 (Page / Section 2):**
 - Displays the total count of new leads assigned and currently present under each user's disposition.
 - **Calculation Logic:** The system dynamic counter calculates this metric by aggregating and counting all entries with a "New Lead" status within the Block 2 **CURRENT DISPOSITION** section for every respective user.

Cross-Block System Coordination Matrix

- **Connection to Block 1 (Settings & User Management):**
 - **User Scope & Permissions:** Role-based access ensures only the Super Admin created in Block 1 sees Data Record Upload, Bulk Upload, and Reports, while lower roles (Admin, Manager, Team Lead, Executive) are restricted to Single Upload.
 - **Lead Assignment Engine:** Bulk leads assigned by the Super Admin route directly to the user hierarchy created in Block 1 (e.g., assigning language-matched leads based on language column of excel to specific Executives or Team Leads).
- **Connection to Block 2 (Dispositions & Dashboard Buttons):**
 - **Disposition Column Tracking:** The Report sub-block directly fetches and counts the "New Lead" status column from the Block 2 CURRENT DISPOSITION section to render user-level performance metrics.
